**SUMMARY:** Professor Stout spent a year in New Zealand in 1970-71 on a Senior Research Fellowship offered by the New Zealand government. His tenure was to study landslides throughout the country, and particularly to set up recognition criteria and remediation processes within the various branches of Ministry of Works (roading, railway, power divisions). He has just returned from two months sabbatical leave in New Zealand where he and Dottie evaluated the results of his earlier time there and took comparative pictures of the more active areas. He will be sharing some of these pictures and experiences, and promises to show you a little bit of New Zealand not involved in landsliding (it may be difficult, though)!!!
